

Hawthorne Performance System

Hawthorne Performance System Deployment Options

Option 1) Lower cost cloud hosting by Hawthorne Services:

In this lowest cost option, your data is hosted on our server. The access URL will be unique to your organization, such as: <https://hawthorneps.com/YourCompany/login.php>. In addition, your company logo can be used in place of the Hawthorne Services, LLC and Hawthorne Technology Services logos. Customization is available for the application for a quoted fee. In this configuration, an SSL certificate is used for authentication.

Option 2) Cloud hosting by Hawthorne Services, using a unique domain name of your choice:

In this option, your data is hosted on our server. However, we will work with you to procure a unique domain for your organization, such as: www.YourCompanyHPS/login.php. In addition, your company logo will be used in place of the Hawthorne Services, LLC and Hawthorne Technology Services logos. Customization is available for the application for a quoted fee. In this configuration, an SSL certificate is optional and can be used for authentication.

Option 3) On premise on your server or a server provided by Hawthorne Services:

In this option, your data is hosted on your premises on a server you provide or one provided by Hawthorne Services. The system must be capable of running Windows XP Pro or Windows 7 Professional, and run MySQL database version 5, PHP version 5.3, and Apache. If assistance is necessary to install these applications, we will work with you to provide the server and/or install them. The application will then be available inside your network (within your office), or available from the public internet as well, depending on your network, firewall & ISP. This service must be quoted. Note: It will be necessary to provide Hawthorne with a remote access connection to the server to provide upgrades and support.

For all deployment options:

As part of the initial set-up fee, Hawthorne Services will review a questionnaire with you to facilitate prompt and easy use of your system. This will include setting up a list of departments, organizational values, performance review definitions and scoring scales, and so on. To facilitate initial loading of your employees, an Excel worksheet can be imported into the system.
